

www.yaml.de

Grid Class	Column Width
.ym-g20	20 %
.ym-g25	25 %
.ym-g33	33.3333 %
.ym-g38	38.2 % (Golden Ratio)
.ym-g50	50 %
.ym-g60	60 %
.ym-g62	61.8 % (Golden Ratio)
.ym-g66	66.6666 %
.ym-g75	75 %
.ym-g80	80 %

Flexible Layouts	
.ym-wrapper	Separate values for width.
.ym-wbox	Paddings and borders.

Float Classes	
.ym-clearfix	Clearing floats without extra markup, avoids margin-collapsing problems in static containers.
.ym-contain-dt	Containing floats, to display oversized child-elements.
.ym-contain-oh	Containing floats, overflow, for clipping of oversized child-elements by the parent element without scrollbars.
.ym-contain-fl	Containing float, if relative positioning of the attached element is needed.

Grid	
.ym-grid	Parent class
	Child Classes
.ym-gl	Float direction is left.
.ym-gr	Correction of rounding errors – floating direction of last column to the right.
.ym-g[xx]	Independent control of column- and gutter-widths.
	Optional classes
.ym-equalize	Equalized column heights within a grid row.
.ym-gbox	Holds gutter vales (as padding or margin).
.ym-gbox-left	Aligned left.
.ym-gbox-right	Aligned right.
.linearize-level-1	Add to any grid module, you want to be linearized.

Buttons	
.ym-button	Default button style and size.
.ym-small	A smaller button.
.ym-xsmall	A very small button.
.ym-large	A more emphasized button.
.ym-xlarge	A very large button.
.ym-primary	Primary action button (purple).
.ym-success	Positive action button (green).
.ym-warning	“Take with care” action button (yellow).
.ym-danger	Dangerous action button (red).

Form	
.ym-form	Parent class
	Row wrapper
.ym-fbox	Creates box.
.ym-fbox-footer	Box positioned as footer.
.ym-fbox-wrap	Box wrapping.
	IE6 helper classes
.ym-fbox-text	For text input.
.ym-fbox-select	Select-box.
.ym-fbox-check	Check-box.
.ym-fbox-button	For custom or submit button.
	Optional classes
.ym-full	Provides a stacked view of labels and related form elements. Width of all form elements is normalized to 100& width.
.ym-columnar	Provides columnar arrangement of form elements.
.ym-inline	Creates inline.
.ym-required	Visually emphasizes as required.
.ym-error	Highlights form fields with invalid form elements.
.ym-message	For output messages that will be correctly aligned in all form styles.
.ym-fbox-heading	Use this before the button set for more consistent appearance of forms.
.ym-label	Forces any heading level to fit into your form theme.

Columns	
.ym-column	Parent class
	Child classes
.ym-col[1 2 3]	For independent control of column widths and paddings.
	Optional classes
.ym-cbox	Creates column box.
.ym-cbox-left	Aligned left.
.ym-cbox-right	Aligned right.
.linearize-level-1	Add to any column module, you want to be linearized.

Accessibility	
.ym-skiplinks	Parent class, controls the visual properties of the list. Unordered list.
.ym-skip	Child class. Each link in the list is marked up with this class. Required for skip anchors.
	Optional classes
.ym-hideme	Elements are visually hidden in browsers, but accessible for screen readers.
.ym-print	Elements are visually hidden in media screen, but accessible for screen readers and on media print.
.ym-noprint	Elements will not be printed, but are visible on any other media type.

Accessible Tabs	
.jquery_tabs	Specific elements become tab headings.
.tbody	Defines content (or its wrapper).

Tables	
.bordertable	Classic table style.
.narrow	Smaller table rows.
